

## **CHAPTER V**

### **CONCLUSION AND SUGGESTION**

This chapter explains the conclusion of the research and suggestions for the further research or the other research.

#### **A. Conclusions**

The objective of the research is to improve of the students' speaking skills using round robin technique of cooperative learning method. The writer used pre experimental as the method in conducting this research. As stated in the result and discussions in the previous chapter, it can be concluded that the round robin technique was effective in improving the students speaking skills.

In terms of data from the result and discussion above, there was an improvement on the students' speaking skills. It could be seen from the scores of the students' speaking performances conducted in the first meeting or before receiving the treatment and in the last meeting or after receiving the treatment. The mean of the students' speaking performances scores improved from 38.03 to 74.40. Seeing the improvement of the students' speaking scores, it can be concluded that the round robin technique was successful in improving the students' speaking skills.

#### **B. Suggestions**

After conducting the research, some suggestions would then be directed toward the students, English teacher, and other researcher.

### 1. For the Students

The English teaching and learning process can be successful if every participant involved gives positive contribution. Thus, the students as the subject in the learning process should actively involve in the activities during the class. Moreover, if the students want to be able to speak in English better they have to keep practising.

### 2. For the English Teacher.

The English teacher needs to try round robin technique in the learning of speaking. Then, also needs to use interesting media such as pictures, and videos to engage the students' interest, and let the students think and discuss with their friends or partners to make them more active and creative. And the most important thing is let the students speak English as well as the others skills.

### 3. For the next Researchers

The researchers who will conduct similar researches should have better preparation before conducting the research and try to use other techniques of Cooperative Learning method.
