

CHAPTER 5

CONCLUSION AND SUGGESTIONS

This chapter reveals the conclusion of the research and the suggestion that might be able to be taken as the concern to the future study.

A. Conclusion

The result finding of the research has been explained in previous chapter. Based on the result finding, the writer concluded the result as follow:

After computing the data, the score of correlation coefficient (r) was obtained 0.737, and this score is categorized into the *high* correlation. It means that there is a high relationship between students' vocabulary mastery and their translation ability. The score of correlation coefficient (r) is higher than r_{table} in the df of 32 with degree of significant 5% = 0.338 and 1% = 0.435, therefore the score of correlation coefficient = 0.737 is significant. Since $r > r_{table}$, it means alternative hypothesis H_1 is accepted and null hypothesis H_0 is rejected. In other words, there is a relationship between students' vocabulary mastery and their translating ability at the tenth grade students of SMK Profita Bandung in academic year 2015/2016.

B. Suggestions

From the conclusion above, the writer would like to extend some suggestions in order to improve the students' vocabulary mastery and their translation ability.

1. For teacher is suggested to give guidance to their students intensively, about how to translate properly based on translation methods and the procedure of translating. And the teacher is also proposed to give some translating practices to their students continually, to improve their translating ability.
2. For students are suggested to study more, respond in learning process, and they are also suggested to make a note to the new English word they find, in order that their vocabulary mastery and knowledge increase. And
3. For next researchers of similar types are expected to be able to complete the lack of the previous researches.
